

Synology NAS - Snapshot Configuration

1. What is it for?

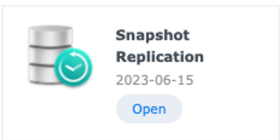

- Take a snapshot of all the files at 00:00 a.m every day so that if any file is deleted accidentally or corrupted, employees can access the snapshot and restore the file

2. Snapshots storage period

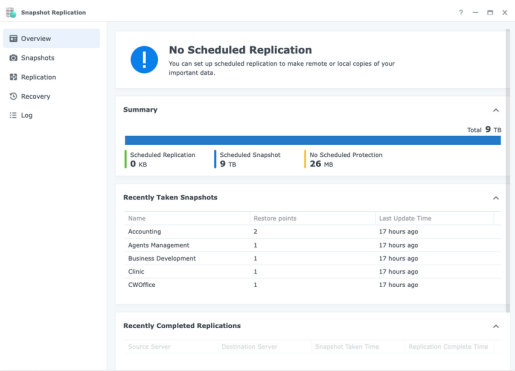

- all snapshots will be kept for 7 days and then they will be deleted automatically

3. Package Used

Installed

4. Data Backup Information

- 9TB of data is scheduled for snapshot replication everyday

5. Snapshots of past 7 days are visible to users in case they need it
